SUMMARY

AI & Backend Developer with experience in LLM post-training workflows, prompt engineering, and building production-ready REST APIs using Python and Flask. Skilled in model evaluation, supervised fine-tuning dataset preparation, and scalable backend system design. Strong foundation in data structures, database architecture, and API security. Focused on developing AI-integrated applications optimized for reliability and performance.

SKILLS

- **Programming Languages:** C, C++, Python, Java.
- **AI & ML:** LLM Post-Training, Prompt Engineering, Model Evaluation, CNN, Scikit-learn.
- **Backend & API:** Flask, REST APIs, Authentication, Session Management.
- **Databases:** MySQL, Firebase.
- **Cloud & DevOps:** Google Cloud, Docker (containerization), CI/CD Pipelines, Git.
- **Frontend:** HTML, CSS, JavaScript, React.js.
- **Concepts:** OOP, DBMS, Operating Systems (basic), Computer Networks (basic).
- **Tools:** Power BI, IBM SPSS, VS Code.

INTERNSHIP

Web Development Intern

06/2025 – 07/2025

Innovations Hub Services Pvt. Ltd., Nashik, India

- Completed an MSBTE-approved internship with hands-on development using HTML, CSS, Bootstrap, JavaScript, PHP, and MySQL to build functional web modules.
- Implemented frontend interfaces and backend logic, participated in database design, and contributed to project planning and coordination activities.

Google Cloud Generative AI Virtual Intern

06/2025 – 07/2025

SmartBridge (Selected under Government of India initiative)

- Gained hands-on experience in Google Cloud Generative AI services.
- Worked on applying AI/ML concepts to real-world scenarios.
- Developed practical skills in cloud computing, model deployment, and AI-driven applications.

Web Development Executive Intern

06/2025 – 09/2025

DialoguesMedia.com, Mumbai, Maharashtra, India

- Engaged in a 90-day educational internship to apply and enhance academic knowledge in web development through practical, real-world projects.
- Developed a full-stack web application using React.js, PHP/Python, and MySQL.
- Designed responsive UI from Figma prototypes and implemented modern, reusable components.
- Built and integrated REST APIs for secure frontend-backend communication.
- Designed optimized database schema and implemented CRUD operations with validation.
- Improved performance through structured API handling and query optimization.

LLM Intern

02/2026 – 05/2026

Ethara AI

- Contributed to LLM post-training and alignment pipelines through structured dataset curation and response evaluation.
- Evaluated model outputs for relevance, factual accuracy, coherence, and hallucination detection.
- Designed structured prompt templates to improve instruction-following and output consistency.
- Assisted in supervised fine-tuning (SFT) dataset preparation and annotation validation.
- Conducted comparative response benchmarking to identify model weaknesses and optimization areas.
- Documented evaluation standards and feedback loops to enhance model reliability and generalization.
- Applied structured evaluation criteria and alignment-focused review processes to support model quality improvement.

PROJECTS

AI Career Assistant Platform

Tech: *React.js, Python, Flask, REST APIs*

- Developed a React-based frontend for user interaction, including resume upload, job search, and dashboard features.
- Built backend services using Flask for resume parsing, ATS scoring, and content generation.
- Designed and integrated REST APIs to connect frontend and backend components.
- Integrated third-party APIs for job listings and automated content generation.
- Implemented efficient data flow between frontend and backend for handling multiple user requests.
- Improved user experience through responsive UI and structured data handling.

CardioAI – ECG Arrhythmia Detection System

Tech: *Python, CNN, Scikit-learn, Flask*

- Developed a two-stage ECG arrhythmia classification system using CNN and ensemble models (Gradient Boosting, Random Forest) for multi-class prediction.
- Performed signal preprocessing and feature engineering including R-peak detection, beat segmentation, and HRV feature extraction.
- Applied sliding window analysis with 30+ extracted features to enhance temporal pattern recognition and model accuracy.
- Trained and validated models on the MIT-BIH Arrhythmia Dataset for reliable classification performance.
- Built a Flask-based inference API enabling ECG upload, automated prediction, and recovery-time estimation using HRV and arrhythmia severity metrics.

Department ERP System – Role-Based Academic Management Platform

Tech: *Python, Flask, MySQL*

- Designed and implemented backend architecture for managing student records and workflows.
- Developed RESTful APIs for CRUD operations and role-based access control.
- Designed normalized relational database schema for efficient data handling.
- Implemented secure authentication using session management and password hashing.
- Prevented SQL injection using prepared statements and validated user inputs.
- Handled edge cases in authentication and improved system reliability.

Smart Farming Assistant

Tech: *Python, Firebase, ESP8266*

- Built a real-time data system for monitoring soil moisture and environmental conditions.
- Developed backend logic for processing sensor data and generating insights.
- Integrated Firebase for real-time database updates and dashboard synchronization.
- Improved efficiency by automating irrigation recommendations.

Joshi Hospital Web Portal

Tech: *Full-Stack Web Application, Google Cloud, Google Maps API*

- Designed and developed a full-stack hospital web application to digitally manage hospital information and patient appointments.
- Implemented dynamic modules for doctor profiles (qualification, specialization), medical facilities, equipment details, and hospital overview.
- Integrated an online appointment booking system with backend validation and structured database management.
- Embedded Google Maps API for real-time hospital location and navigation support.
- Developed responsive UI and a secure admin panel for managing doctors, appointments, and hospital data.
- Successfully deployed and hosted the application on a Google Cloud-based hosting environment.

EDUCATION

B.Tech in Artificial Intelligence and Machine Learning

Current

Sanjivani University, Kopergaon, Maharashtra, India

Diploma in Computer Science Engineering

2021 – 2024

Dr. Vitthalrao Vikhe Patil Institute of Technology & Engineering (Polytechnic), Loni, Ahmednagar, Maharashtra, India
