OBJECTIVE

B.Tech student specializing in Artificial Intelligence and Machine Learning with experience in Python, IoT, and full-stack development. Successfully developed real-world projects and scalable web platforms.

EDUCATION

B.Tech in Artificial Intelligence & Machine Learning

CGPA(2nd year) : 7.86

CGPA(3rd year) : 7.82

Sanjivani University Kopergaon, Maharashtra, India (Expected 2027)

Diploma in Computer Technology

Percentage: 82.86 %

Sanjivani K. B. P. Polytechnic Kopergaon, Maharashtra, India (2021-2024)

SSC

Percentage: 89.00%

Dr. C. M. Mehta Kanya Vidya Mandir, Kopergaon, Maharashtra, India 05/2021

TECHNICAL SKILLS SOFT SKILLS

Programming Languages - C, Java, Python.

Web Technologies - HTML, CSS, JavaScript, React.

AI Technologies - NLP, DeepLearning, AI, ML

Data Base – MySQL, MongoDB, Firebase

Tools & Platform – Git, Github, VS Code, Google colab, Power BI, IBM SPSS

INTERNSHIP

Nasscom Gen AI

Ethara.ai (3 Months)

PROJECTS

Night Patrolling Robot

Technologies: Arduino/Raspberry Pi, IR & Ultrasonic Sensors, PIR Motion Sensor, Camera Module, Wi-Fi/Bluetooth, Embedded C/Python, IoT Integration.

Developed an autonomous/security-based robot designed for night surveillance. The system detects obstacles and human movement using sensors and captures real-time images/videos through a camera module. It sends alerts to the user via mobile or web application when suspicious activity is detected. Helps in improving security, reducing manual patrolling effort, and enabling remote monitoring.

Smart Posture Alert System

Technologies: Arduino/ESP32, MPU6050 Sensor, IoT, Embedded C, Bluetooth/Wi-Fi, Mobile App Integration.

Built a wearable IoT-based device that monitors user posture using an accelerometer and alerts through vibration or mobile notification when poor posture is detected. Helps in health monitoring and ergonomics improvement.

Solar Panel Cleaning Robot

Technologies: Arduino/Raspberry Pi, Ultrasonic & Dust Sensors, Servo/DC Motors, Embedded C/Python, CAD Design.

Developed a robotic system for automated cleaning of solar panels to maintain efficiency and reduce manual labor. Designed with mechanical mobility and sensor-based cleaning.

Doctor Meet – Smart Healthcare & Appointment System

Technologies: Python, Machine Learning (Random Forest/Logistic Regression), Natural Language Processing (NLP), Flask/Django, SQLite/MySQL, API Integration, HTML/CSS/JS.

Developed an ML-based healthcare system that predicts diseases from symptoms and recommends the right doctor specialization. Added features for online appointment booking, doctor availability tracking, and managing patient records through a simple web interface.
