EDUCATION

Sanjivani University, Ahilyanagar, Maharashtra

August 2024 – May 2027

BTech Computer Science Engineering specialisation in Artificial Intelligence and Machine Learning | CGPA : 7.32/10

Relevant Courses: Data Structures and Algorithms (DSA & DAA), Database Management Systems (DBMS),

Operating Systems (OS)

Sanjivani K.B.P Polytechnic Ahilyanagar, Maharashtra

August 2020 – Jan 2024

Diploma in Mechatronics | Percentage : 70.96%

Sant Dnyaneshwar English Medium School, Ahilyanagar, Maharashtra — (SSC)

March 2020

Class X – Percentage : 85.00 %

EXPERIENCE

AI Intern – Ethara.AI (Virtual Internship)

Feb 2026 – May 2026

- Working on AI data annotation and dataset preparation for training machine learning models..
- Performing daily annotation tasks to improve AI model accuracy and data quality.
- Learning practical concepts related to Large Language Models (LLMs) and AI model training pipelines.

Internz learn (Data Science Intern) – Pune, Maharashtra

August 2025 – Sep 2025

- Worked with Python, Pandas, and NumPy to clean, transform, and analyze structured datasets.
- Performed exploratory data analysis (EDA) and built basic machine learning models for prediction tasks.
- Gained hands-on experience in data preprocessing, visualization, and basic model evaluation techniques.

TECHNICAL SKILLS

Programming Languages : Python, Java, C++, JavaScript

Libraries and Frameworks : NumPy, Pandas, Matplotlib, Scikit-learn, Flask.

Tools : Jupyter Notebook, Git, GitHub.

Operating Systems & Utilities : Unix/Linux CLI for development and basic deployment tasks.

Languages : English (Fluent, Medium of Education), Marathi (Native Speaker), German (Basic).

PROJECTS

Computer Vision Project : Smart Posture Correction System

November 2025

- Developed an AI-based posture monitoring system using Python and computer vision to analyze body posture in real time.
- Detected incorrect neck and torso angles and generated instant feedback and alerts for posture correction.
- Designed the system to support health, ergonomics, and workplace wellness applications.

[Github Repository Link](#)

OpenCV & Deep Learning : Real-Time Footfall Counting System Using OpenCV and DL for Intelligent Crowd Monitoring

Dec 2025

- Developed a real-time person detection and counting system using Python, OpenCV, and deep learning from video streams.
- Implemented object detection-based tracking to accurately count footfall and analyze crowd density.
- Designed for intelligent crowd monitoring use cases such as public safety, smart surveillance, and resource planning.

[Website Link](#)

IIT Guwahati Competition : Maze Solving Robot

Aug 2025

- Designed and implemented autonomous navigation logic using ESP32 and C++ for real-time decision making.
- Developed path optimization algorithms using sensor inputs to handle dynamic maze conditions..
- Integrated sensor-based control to enable accurate movement, obstacle detection, and route selection.

AWARDS & CERTIFICATIONS

AWARDS

Best Paper Award – “Real-Time Footfall Counting System Using OpenCV and Deep Learning for Intelligent Crowd Monitoring”

1st International Conference on Sustainable Innovations in Engineering, Science and Management, Sanjivani University, 2026

CERTIFICATION

- IBM Watson Studio**
Gained practical experience in data cleaning, transformation, and visualization using IBM Watson Data Refinery. Built and deployed ML models on Watson Auto AI.
- Predictive Modeling with IBM SPSS Modeler**
Skilled in predictive modeling, statistical analysis, and automated reporting for business intelligence and data-driven insights.
- IBM DevOps Fundamentals**
Utilized DevOps practices to simplify model deployment, versioning, and continuous integration in cloud-based analytics workflows.
