EDUCATION

Sanjivani University, Ahilyanagar, Maharashtra

BTech Computer Science Engineering specialisation in Artificial Intelligence and Machine Learning | CGPA : 7.12/10
Relevant Courses: Data Structures and Algorithms (DSA & DAA), Database Management Systems (DBMS),
Operating Systems (OS)

August 2024 - May 2027

Sanjivani K.B.P Polytechnic Ahilyanagar, Maharashtra | Diploma in Mechatronics

August 2020 - Jan 2024

Ashok English Medium School, Ahilyanagar, Maharashtra — (SSC)

March 2020

Class X - Percentage : 67.00 %

EXPERIENCE

Diploma Engineer Larsen & Toubro Precision Engineering Systems -Pune, Maharashtra

June 2023 - June 2024

- Completed 1-year apprenticeship in the Defence sector, contributing to the integration, testing, and validation of critical electronic systems for force deployment.
- Assisted in assembling defence equipment while following strict standards for precision and reliability in a controlled environment..
- Contributed significantly to assembling and testing over 12 ASW launcher systems. Ensured they were 100% operational and met strict naval warfare standards.

LLM Post Training Intern Ethara AI - Remote

Feb 2026 - May 2026

- Performed **high-quality data annotation and response evaluation** on the MultiMango platform to improve Large Language Model (LLM) outputs, focusing on accuracy, reasoning, and instruction alignment.
- Applied **post-training techniques such as supervised fine-tuning (SFT) support and human feedback evaluation**, ensuring consistency, factual correctness, and reduction of model hallucinations.
- Designed and refined **prompt-response pairs, edge cases, and evaluation guidelines**, contributing to improved model performance across diverse real-world scenarios.

TECHNICAL SKILLS

Programming Languages: Python, Java

AI/ML & Data Science: Scikit-learn, TensorFlow, Pandas, NumPy, Matplotlib, Langchain, IBM Watson

Tools & Platforms: Git, GitHub, Docker

Languages: English (Fluent), Marathi (Native), German (Basic)

PROJECTS

Finance & Compliance Data Analysis Project: GST Anomaly Detection System

November 2025

- Technologies Used** : Python,scikit-learn(Random Forest),matplotlib.
- Implemented an ML pipeline to find fraudulent GST filings.
- Applied Random Forest and analyzed feature importance to find key GST fraud indicators such as ITC Mismatch Rate and Supplier Concentration.

Lightweight RAG System: CPU-Only Document Question Answering

April 2026

- Technologies Used:** Python, FastAPI, PyMuPDF, Tesseract OCR, JavaScript, HTML, CSS
- Developed a lightweight Retrieval-Augmented Generation (RAG) system that performs document-based question answering without using vector databases or embeddings.
- Implemented PDF processing pipeline using PyMuPDF and Tesseract OCR to extract both textual and scanned content.
- Designed a keyword-based retrieval mechanism to efficiently select relevant document chunks in CPU-only environments.
- Integrated LLM API (Groq) to generate context-aware responses in a chat-style interface.

CERTIFICATIONS

- IBM Watson Studio** – Built & deployed ML models via Auto AI data pipeline automation
- Predictive Modeling (IBM SPSS)** – Statistical modeling for business intelligence
- IBM DevOps Fundamentals** – CI/CD & model deployment in cloud workflows
