

PATHAN RIHAN MIRKHA

AI Automation Engineer · Agentic AI Developer · AI Integration Engineer

rihanpathan1320@gmail.com · +91 82630 91722 · Kopargaon, Maharashtra

linkedin.com/in/rihan-pathan · github.com/Rihanpathan

PROFESSIONAL SUMMARY

Final-year CSE student specializing in agentic AI, intelligent automation, and workflow orchestration. Built and deployed multi-agent architectures, RAG pipelines, and system integrations using LangChain, n8n, and GenAI APIs to replace manual workflows with automated systems. Completed a web development internship at HCLTech working on REST API integrations, OAuth2 authentication, and webhook-based system integration. Looking for roles where I can design agentic AI systems, orchestrate multi-tool workflows, and integrate LLMs into production automation pipelines.

EDUCATION

B.Tech — Computer Science & Engineering

Expected May 2027

Sanjivani College of Engineering, Kopargaon · CGPA: 7.2 / 10.0

Diploma — Computer Engineering

2024

Ashok Institute of Engineering & Technology, Ahmadnagar

PROFESSIONAL EXPERIENCE

Web Developer Intern | HCLTech, Pune

Jun 2025 – Dec 2025

- Built and integrated frontend components with REST APIs using OAuth2 authentication, tested and documented all endpoints in Postman.
- Worked on webhook configurations and backend API connections across team projects, contributing to cleaner integration workflows.
- Managed pull requests and version control using Git, following standard branching and code review practices throughout the project.

PROJECTS

Multi-Agent LLM System for Career Guidance

Jun – Jul 2025

Stack: LangChain · OpenAI API · Anthropic Claude API · RAG · Agentic Memory

- Designed a multi-agent orchestration system using LangChain where an orchestrator agent routes queries, retrieves context from a vector store, and uses agentic memory to personalize responses for each user.
- Built the full RAG pipeline from scratch: document ingestion, chunking, embedding generation, and vector retrieval — delivering career roadmaps to 50+ test users.

Smart Email Classifier & Serverless Automation System

May 2026

Stack: n8n · Google Apps Script · Gmail API · Telegram Bot API

- Built a serverless workflow orchestration pipeline that monitors two Gmail inboxes every 15 minutes, classifying 100+ daily emails by category — removing all manual sorting.
- Migrated from an n8n prototype to Google Apps Script for continuous cloud execution; integrated real-time Telegram alerts and an automated morning digest delivered every day without manual input.

AI-Powered Business Automation Assistant

May 2026

Stack: Python · Streamlit · Gemini API · SQLite · SMTP · Streamlit Cloud

- Deployed a full-stack assistant integrating the Gemini API for contextual Q&A, SQLite for data storage, and Gmail SMTP for automated reporting — handling daily business operations end-to-end.
- Built three automation pipelines: form-to-email triggers, chatbot interaction logging with usage analytics, and one-click CSV report delivery via email.

RAG-Powered Resume Intelligence & Recommendation System

Jan – Feb 2025

Stack: LangChain · NLP · Vector Database · Embedding Pipeline

- Built an end-to-end RAG pipeline — document ingestion, semantic chunking, embedding generation, and vector retrieval — to extract skills from unstructured resumes and benchmark them against market demand data.

TECHNICAL SKILLS

AI & Agentic Frameworks: LangChain, LangGraph, Multi-Agent Systems, RAG, Prompt Engineering

GenAI APIs: Google Gemini API, OpenAI API

AI Dev Tools: Cursor, Claude Code, GitHub Copilot, Bolt

Automation Platforms: n8n, Make.com, Google Apps Script, SMTP Automation, Webhooks

Languages: Python, JavaScript, SQL, Java

Backend & APIs: FastAPI, REST APIs

Frontend & UI: React, Streamlit

Databases: Vector Databases (FAISS / Chroma), SQLite, MongoDB, MySQL

DevOps & Tools: Git/GitHub , Streamlit Cloud

CERTIFICATIONS

- LangChain for LLM Application Development — DeepLearning.AI (Nov 2025)
- Deep Learning Specialization — DeepLearning.AI / Coursera (Sep 2025)
- Natural Language Processing with Deep Learning — Stanford Online (Jan 2025)
- Generative AI Fluency Professional Development — Industry Certificate (May 2025)

ACHIEVEMENTS & LEADERSHIP

- Semi-Finalist — NextWave Buildathon, Pune (2026): Selected among top regional teams for an AI automation project.
- Regional Qualifier (Round 2) — Smart India Hackathon (2025): Advanced from college level to regional stage.
- Documentation Head, CSE Student Association (Jan 2025 – Present): Organised technical workshops for 300+ students and maintained a knowledge base for a 50-member team.
