SUMMARY

B.Tech (AI & Data Science) student. Experienced in building production-grade AI pipelines, including multi-agent systems and real-time detection models. Highly proficient in the full ML lifecycle—from data preprocessing and model evaluation to deployment via FastAPI and Streamlit. A fast-learning problem solver with a background in leadership, dedicated to building high-fidelity, intelligent systems that drive innovation.

SKILLS

Programming Languages Python, Java, SQL, Data Structures (Basics)
AI & Computer Vision TensorFlow, CNN, LLM, OpenCV, NLP, Grad-CAM, LLAMA
Data Science & ML Pandas, NumPy, Scikit-learn, Data Preprocessing, Model Evaluation, EDA, Feature Extraction
Web & Backend RESTful API, Node.js, Streamlit
Databases & Deployment Firebase, MongoDB, Streamlit, Render, MySQLi, CI/CD, JIRA
Tools Git, Github, Jupyter Notebook, Google Colab, Docker, Jenkins, Kubernetes, VS Code
Soft Skills Problem Solver, Leadership, Fast Learner, Good Collaborator
Languages English, Marathi, Hindi, German(Beginner)

EDUCATION

B.Tech in Computer Science Engineering (AIDS), Sanjivani University, Kopargaon, India (GPA: 7.94) '24 — Present
Diploma in Computer Engineering, MIT Polytechnic, Vaijapur, India (GPA: 7.89) '20 — '24

PROJECTS

DocuIntel AI — Parallel Multi-Agent Research Analysis Engine

- Built an AI pipeline to transform dense academic PDFs into structured summaries and technical tables with high extraction accuracy.
- Developed asynchronous multi-agent workflows using FastAPI, PyMuPDF, and Llama-based models for scalable and rate-limited document processing.

Deep Learning–Based Cancer Detection in Capsule Endoscopy Images [Link](#)

- Developed a ResNet50-based deep learning system to detect gastrointestinal diseases from capsule endoscopy images.
- Classified conditions including ulcerative colitis, esophagitis, polyps, and normal tissue to support early diagnosis and medical image analysis.

MandiBot: AI-Based Crop Price Assistant for Farmers [Link](#)

- Developed an AI-powered chatbot to help farmers check real-time mandi crop prices using natural language queries.
- Implemented location-based crop price search and comparison through an interactive Streamlit interface.

Chest X-Ray Disease Detection using Deep Learning [Link](#)

- Developed a DenseNet121-based system for disease detection from chest X-ray images using deep learning techniques.
- Improved diagnostic analysis using preprocessing, augmentation, and Grad-CAM explainability.

Machine Learning Customer Segmentation Project [Link](#)

- Developed a K-Means clustering model to segment customers based on age, income, and spending behavior.
- Improved clustering performance using preprocessing, feature scaling, and Elbow and Silhouette analysis methods.

CERTIFICATIONS

Business Intelligence , IBM	May '25
DevOps Fundamentals , IBMCE	Dec '24
Predictive Modeling with IBM SPSS Modeler , IBM	Oct '25
Big Data Technologies - Spark and Scala Fundamentals , IBM	Apr '26

PUBLICATIONS & CONFERENCE PRESENTATIONS

Presented a research paper titled

“Deep Learning–Based Cancer Detection in Capsule Endoscopy Images using the Kvasir V2 Dataset”

- At the 1st International Conference on Sustainable Innovations in Engineering, Science, and Management (SIESM-2026),

- held on 9–10 January 2026 at Sanjivani University, Kopargaon.

PARTICIPATION & HACKATHONS

Participate in Smart India Hackathon	Sep '25
Sanjivani University	
Developed a YOLOv11-based AI system to detect flood victims via drone footage, with real-time alerts and a mobile app for rescue coordination.	
Supernova - Protonova Project Competition	Sep '25
MGMU Chhatrapati Sambhajnagar	
Presented a Deep Learning chest X-ray cancer detection project at Supernova – Protonova with a React app.	

VOLUNTEERING

Vice President , Computer Engineering Dept. MIT Polytechnic	Vaijapur '21 — '22
President , Computer Engineering Dept. MIT Poly	Vaijapur '23 — '24
