

SAHIL ABAK

B.Tech in Artificial Intelligence & Machine Learning

Kopergaon , India 423601 | sahilabak45@gmail.com | +918329869109 | LinkedIn | GitHub

SUMMARY

Detail-oriented and innovative engineering student with a strong foundation in software development, DevOps, and AI applications. Experienced in building real-world projects spanning medical imaging, web technologies, and automation. Adept at full-stack development, machine learning, and deploying scalable solutions with modern tools and frameworks. Passionate about solving complex problems and continuously expanding technical expertise through research and hands-on experience.

EDUCATION

Matoshri Institute Of Technology

Percentage: 83.20% Sep 2021-Jun 2024

B.Tech in Artificial Intelligence and Machine Learning

Sanjivani University, Kopergaon

Jul 2024 – Present CGPA: 7.5 (Current)

SKILLS

- Languages: Java, Python, C++, JSS
- Database: MongoDB and Firebase
- DevOps and deployment: Docker, Jenkins, and Postman (API testing)
- Frameworks: Flask, React.js, Node.js
- Version control and collaboration: Git, GitHub

ACHIVEMENTS

Successfully published a Research paper on a “VIPERSCAN A SECURITY SCANNER” on IRJMETS

CERTIFICATIONS

- IBM DevOps Fundamentals
- IBM Cloud Fundamental
- Predictive Modeling with IBM SPSS Modeler

EXPERIENCE

Web Development at V3 Data Solution , Nashik

- Completed a web development internship focused on building responsive websites using HTML, CSS, and JavaScript.
- Gained hands-on experience in creating interactive user interfaces, optimizing web layouts, and implementing front-end functionality.

PROJECTS

1) Prostate Cancer Detection Using U-Net

- Developed a deep learning model using U-Net architecture for prostate cancer detection through medical image segmentation
- Achieved 95% segmentation accuracy and a structural similarity index (SSIM) of 0.95, indicating high similarity between predicted and ground truth cancer regions
- Demonstrated a strong understanding of semantic segmentation, medical image analysis, and performance metrics in healthcare AI

2) Bitcoin Price Prediction Dashboard

Tech Stack: Python, LSTM, TensorFlow, Flask, Plotly

- Built an end-to-end Bitcoin price prediction system using LSTM Deep Learning model trained on 730 days of historical data.
- Achieved 99.54% model accuracy with RMSE of \$586 and MAPE of 0.46%.
- Developed interactive web dashboard using Flask + Plotly with real-time charts for historical prices, predictions & 30-day forecast.
- Deployed live on Render cloud platform with REST API endpoints. Implemented data preprocessing pipeline with MinMaxScaler normalization and 60-day sliding window.
